

D. SRINIVASA REDDY

9100423977 | srinivasareddydam25@gmail.com

Professional Summary

Backend Software Engineer with 2.5+ years of experience in building scalable microservices, distributed systems, and event-driven architectures in the banking domain. Skilled in Java, Spring Boot, Spring Data JPA, Apache Kafka, and REST API design. Proven ability to deliver high-throughput, fault-tolerant applications in Agile/Scrum environments, with expertise in cloud-native development, performance optimization, and reliability engineering.

Skills

Programming : Java, OOP Concepts, RESTful API
Frameworks/Tools : Spring Boot, Hibernate, Microservices, JDBC, Spring, Apache Kafka, Git, GitLab, AWS
Database : MySQL, MongoDB
Testing : Mockito, Junit
Soft Skills : Critical Thinking, Effective Communication, Problem Solving, Collaboration, Team Work

Work Experience

Associate Software Engineer, Mphasis Ltd Chennai, Oct 2023 - Present

Project: OPTIS Transformation – Legacy to Microservices Modernization (Banking Domain)

- Designed and developed Spring Boot microservices by decomposing legacy COBOL modules, reducing system coupling by ~40% and enabling independent deployments.
- Translated Logical Data Models (LDM) into optimized Java domain models, DTOs, and REST APIs, improving data consistency and reducing integration issues by ~30%.
- Built and optimized RESTful APIs with validation, exception handling, and idempotency, achieving ~25% improvement in API response reliability.
- Implemented event-driven architecture using Apache Kafka, enabling asynchronous communication and reducing inter-service latency by ~35%.
- Developed backend services processing 100K+ events/day for critical banking workflows.
- Designed and optimized MongoDB schemas and indexing strategies, improving query performance by ~40% for large datasets.
- Eliminated shared database dependencies by enforcing service-level data ownership, improving scalability and fault isolation.
- Improved system performance by reducing synchronous calls and implementing asynchronous processing, increasing throughput by ~30%.
- Developed stateless microservices, enabling horizontal scaling and high availability in distributed environments.
- Implemented unit and integration testing (JUnit, Mockito), increasing code coverage to ~85% and reducing production defects.
- Performed debugging and performance tuning in distributed systems, reducing incident resolution time by ~25%.
- Managed version control and CI/CD workflows using GitLab, ensuring controlled releases and backward compatibility.
- Collaborated with cross-functional teams to deliver scalable, high-performance backend systems in Agile environments.

Education

Computer Science and Engineering
Bharath University
CGPA - 9.0

June 2018 - May 2022
Chennai

Certifications

GitHub Copilot, Java 8, Java Microservices, Apache Kafka, AWS.
